We define the light

LIK operates in the field of interior and exterior architectural lighting for the professional and private markets

The function of the room, the existing products, and the measurement of the room such as CRI, Kelvin, brightness and flicker are some of the important parameters in our observations and measurements.

Lighting has to be tailored to every room and function, from cozy and warm light at the dining-table, glare-free light at the computer screen, to flexible meeting-room lighting that adjusts for group discussions and presentations.

We design and deliver customized, high-quality lighting solutions that create identity, atmosphere and wellbeing.

We design lighting concepts based on our observations and lighting measurements of the room or building

We define the lighting concept and develop the design based on a minimum of 20 parameters. A LIK lighting design always recommends the optimal range of products, including light system and light sources. We prepare a complete solution including drawings and product list.

With more than 10,000 projects and a highly skilled team of lighting experts, LIK is your professional, dedicated partner for complete lighting solutions.

We collaborate with leading international lighting suppliers, carefully selected for their high quality and innovation.

HimmerLand

HimmerLand is a renowned Danish resort known for its international golf tournaments and luxurious accommodations in beautiful natural surroundings. As part of an extensive renovation project, we delivered the optimal lighting solution for guests and staff, using only standard products like Zoom Spot, Brick and Black Eye. The result will help HimmerLand remain among the best in the Nordics.

“ It was truly eye-opening to witness how light design can elevate a room. LIK's dedication and expertise helped take this project to a whole new level.

Andy Thorø Kristensen, Sales Manager at Third.space

Bygholm agricultural school equips the next generation of Danish farmers with hands-on experience and the latest theory. To utilise their spaces, the school had converted an old gymnastics hall into an auditorium and working spaces. We assisted Cintu architects with light design and installation. Using different lamps' sizes, we create an inspiring and playful light with the ideal brightness to learn and work.

“ Including LIK early in the process was vital for the final result. They converted our dreams and needs into tailored and solid lighting solutions.

Lars Ilsøe, architect and owner of Cintu

BYGHOLM CASE

A total solution

Phase by phase LIK handles your light solutions with the highest professionalism

A LIK lighting design is a total solution. In close cooperation with the customer we define the lighting concept and develop the design based on a minimum of 20 parameters, from the function of the room, the installed products as well as other factors, such as CRI, Kelvin, brightness and flicker.

The Light Concept Model symbolises our approach to project management. Every light-project is steered professionally, phase by phase. We focus consistently on light design, quality, rapid implementation and on creating the right light solutions.

LIGHT CONCEPT MODEL

-  Define the light
-  Light concept
-  Light-design & development
-  Light-plan, drawings and product list
-  Proposal
-  Shipping and delivery
-  Installation on site

Autocentralen's new showroom is lit to amaze and inspire. Together with LIK Lighting, we provided an impactful yet discrete solution for the Danish car dealer.

Autocentralen's renovated car showroom required a flexible and effective lighting solution. With three car brands on display and a section for used cars all in one room, it's a complex environment to light up properly. However, using our Hybrid system, we were able to provide an efficient custom-tailored solution, that makes the cars look amazing both day and night.

The flexible lighting system can be configured to meet each car brands' unique demands. Still, it's classy enough to complement the ceiling and powerful enough to deliver the necessary lux across the entire sales area. Now, the room is set up for Autocentralen to close the deal.

// We had great ambitions for the atmosphere in the showroom so client and coworkers felt relaxed. Working with LIK and here&after has been a real pleasure. Their professional approach and creative mindset resulted in a simple and elegant solution, complementing the old ceiling and makes for a unique design. All in all, our expectations were surpassed greatly.

Maichael Rand, Brand Manager at Autocentralen

AUTOCENTRALEN CASE

LIK LIGHTING

Healthy lighting

Light plays a big part in our life. It influences our health, controls our circadian rhythm, and affects our motivation and functionality. Back in the day, the sun controlled our daily routines, but as we spend most of our days indoors, we need to install proper lighting to maintain good health. Because the optimal lighting, whether in the office, at a café or at home, can help reduce headaches, fatigue, and strained eyes. Research shows that improving lighting immediately enhances cognitive capabilities, which are crucial for problem-solving, strategic thinking, and learning, among others. To create the right lighting, you need to balance natural and artificial lighting. By evaluating and adjusting CRI, kelvin, flickering, brightness, and luminance throughout the day, we can design lighting that follows the natural lighting outside, supports your circadian rhythm, and fits your environment. Ultimately, it will help you live a better and richer life.

Ordrupgaard houses Northern Europe's most comprehensive Danish and French art collection from the 19th and early 20th centuries. In 2021, the museum's existing buildings were energy optimised in collaboration with COWI, who also oversaw the museum expansion with a subterranean wing designed by Snøhetta. We customised our Zoom spots to deliver basic lighting sources for the new underground branch and replaced the existing lighting sources in the French exhibition with new and more energy-efficient solutions. The result reduces energy consumption and provides the museum's international visitors with an outstanding art experience.

// LIK's expertise and ability to deliver a tailored and efficient lighting solution has been significant for the final result.

Jørgen Kjer, Light Designer & Chief Specialist

hotelhedegaarden

KURSUS & KONFERENCE HOTEL SELSKABER EVENTS

Hedegaarden is a popular hotel in the Western part of Denmark. Their award-winning chef serves both Danish and French classics and innovative flavour fusions. Hedegaarden needed a matching lighting solution for their beloved restaurant, so we custom-designed lights and tailored the installation to create the optimal dining atmosphere. The lighting can be adjusted according to the hour and helps guests focus on the two most important things; their company and the plate in front of them.

// We take pride in giving our guests unique dining experiences. Here, lighting is an important but often overlooked ingredient. LIK has provided an elegant solution that serves the setting perfectly.

Tom Thomsen, Manager at Hedegaarden

SHAPING NEW TOMORROW®

Shaping New Tomorrow rethinks men's fashion. Their popular trousers and shirts have sent the Danish clothing brand on an impressive growth journey. Each collection pushes boundaries and expectations, and this uncompromising attitude is repeated in their physical stores. No element is left to chance. Shaping New Tomorrow, architect Guldmann Studio and we tailor the lighting for each new store. The results build the brand through storytelling and quality, which ultimately creates the best possible customer experience.

// In Shaping New Tomorrow, we try to make the perfect a little more perfect tomorrow, especially our guests' store experiences. Therefore, it is incredibly important that our partners have the same drive and sense of the details that help make the difference. For that reason, we are super happy about our collaboration with LIK, which is part of our journey to create Retail's next generation.

*Frederik Chopart, Global Sales & Culture Manager,
Shaping New Tomorrow*

// Visiting our stores as a guest is more than just shopping. It is an experience of future retail, environment and atmosphere, a mindset and a feeling. Our specially developed and tested lighting solution from LIK supports that ambition. The perfect setting that makes you unique and relaxed, invited as our best guest.”

Jakob Slot, Head of Store Design & Expansion ved Shaping New Tomorrow

// LIK’s dedication has been essential in bringing the store concepts to life. Their knowledge and hands-on approach ensure high-quality on-brand lighting that is both beautiful and powerful.”

Jacob Guldmann, Creative Director og ejer af Guldmann Studio

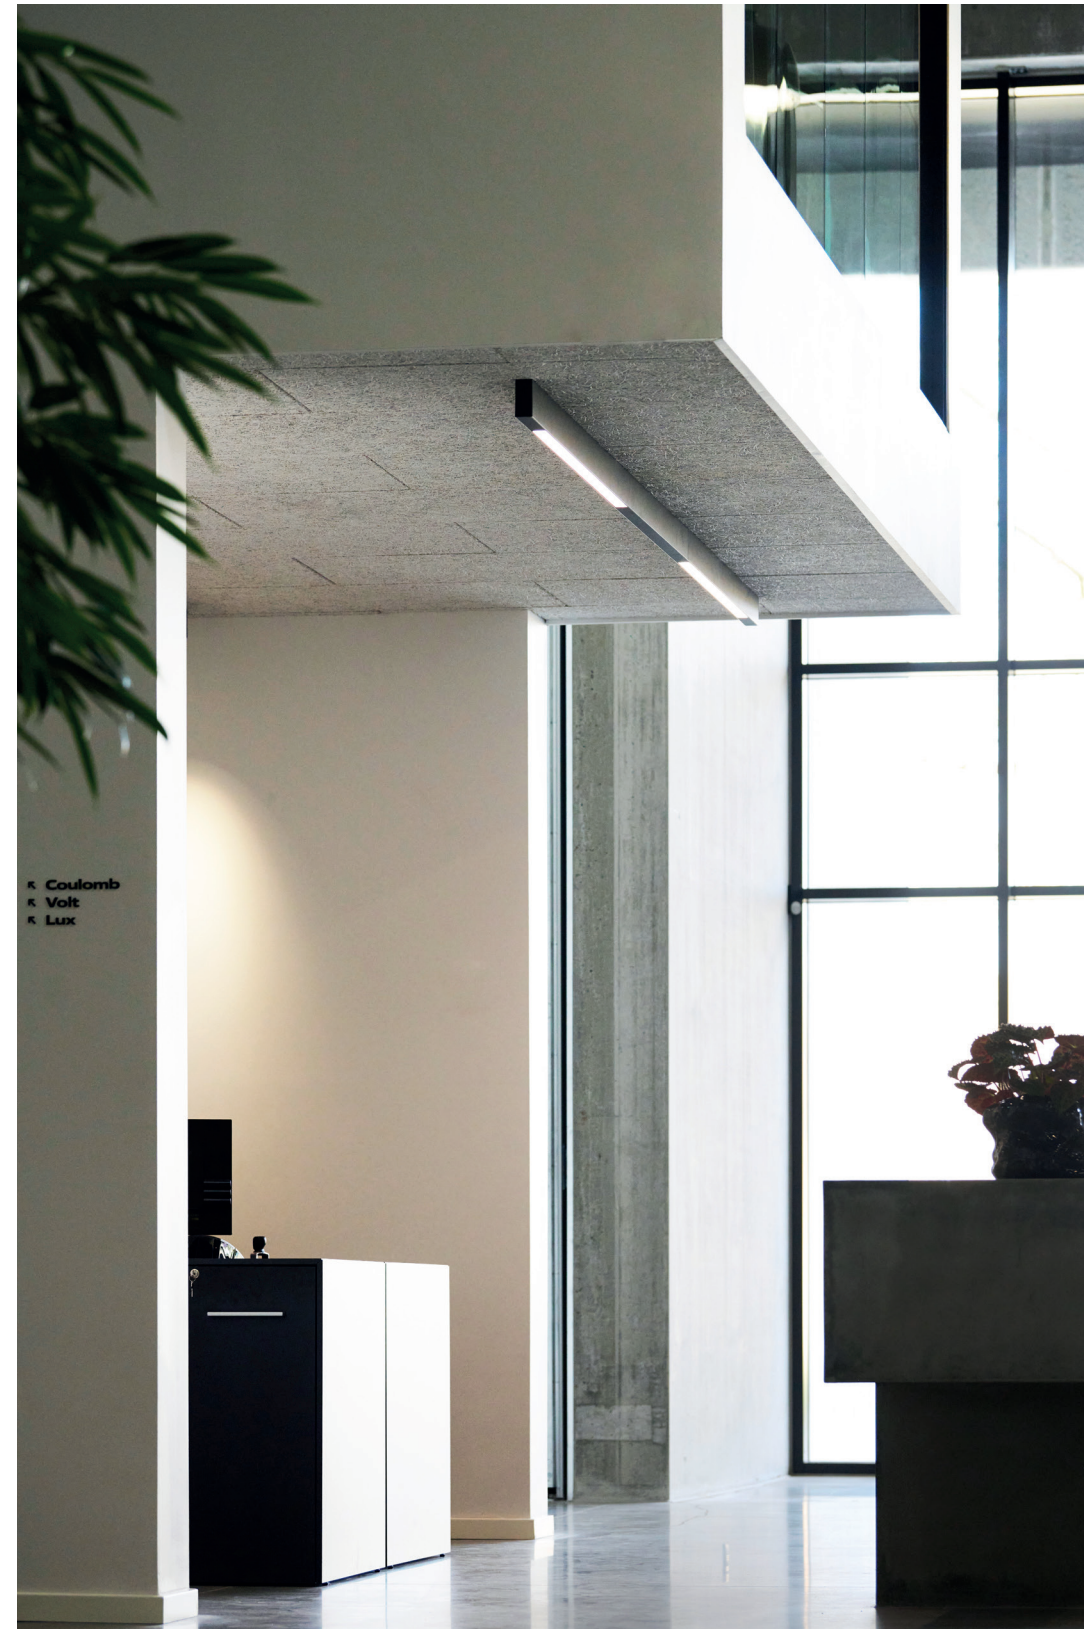

NRGI ELCON

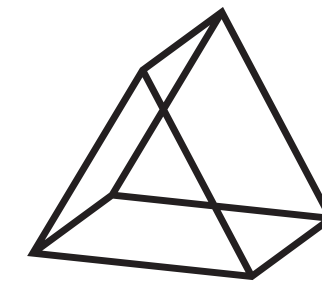

ELCON is a major player in the Danish electrical engineering market. In 2022, the company inaugurated their new headquarters in Brabrand, drawn by Danish architectural studio Ambiente to gather all ELCON's competencies under one roof. We contributed with a state-of-the-art lighting solution that supports the new office's interior design concept and overall aesthetic. Our Hybrid system provides high-performance and comfortable lighting from low-level energy consumption, pleasing coworkers and customers in the daily life at the headquarters.

// A state-of-the-art headquarters requires state-of-the-art lighting. And using Hybrid, we reached the goal of creating a unique lighting solution that live up to today's standards for energy consumption and glare.
